QuestionAnswer What makes plants grow taller and stronger? Plants grow taller and stronger when they get enough sunlight, water, and nutrients from the soil. These things help their leaves make food and help the plant develop healthy roots and stems. How do animals adapt to survive in cold or hot environments? Animals adapt by developing special features like thick fur for cold places or light-colored fur for hot deserts. They may also change their behavior, like migrating or resting during the hottest or coldest times. Why do some objects float while others sink in water? Objects float or sink based on their density. If an object is less dense than water, it floats. If it's more dense, it sinks. This is why a boat can float while a rock sinks. What causes day and night on Earth? Day and night happen because Earth rotates on its axis. When our side of Earth faces the Sun, it's daytime. When it turns away, it's nighttime. How do insects help plants grow? Insects like bees and butterflies help plants grow by moving pollen from one flower to another. This process, called pollination, helps plants make seeds and new plants. Why do we see different colors in a rainbow? We see different colors in a rainbow because sunlight is made up of many colors. When sunlight passes through rain, the light bends and splits into colors like red, orange, yellow, green, blue, indigo, and violet. What happens to water when it gets very cold? When water gets very cold, it freezes and turns into ice. The water molecules slow down and stick together to form solid ice. How do volcanoes erupt? Volcanoes erupt when magma from inside the Earth finds a way to the surface. The magma, which is very hot, erupts as lava, ash, and gases, building up the volcano's shape. Why do some objects make sounds when they hit a surface? Objects make sounds when they hit a surface because the impact causes vibrations. These vibrations travel through the air as sound waves that we hear as noise. How do weather changes affect animals and plants? Weather changes like rain, snow, or heat can affect animals and plants by changing their habitats, food availability, and ability to survive. Some animals migrate or hibernate to stay safe during tough weather.
